Home use:

- Store all your photo, music, video files on one location
- Make a backup of PC's / files in your home network
- Store a drive image of a clean OS installation on the Mobile Drive Secure and recover it in case of your PC's hard drive failure

The secure mobile hard drive!

You hear about it almost every day – somebody somewhere loses his external hard drive or USB stick, and all kinds of confidential information (government information, credit card details etc.) is out there, for everybody to see. If these drives fall into the wrong hands, it could have a potentially disastrous effect for a lot of people.

Freecom recognizes the need for a secure external hard drive. The Freecom Mobile Drive Secure is a new concept of data protection. Your drive is not protected with a password, but with an encrypted security keycard in the format of a credit card. Only by presenting this keycard to the drive will you get access to the drive, and thereby to your data. Without the keycard there is no way the data can be read by unauthorized persons.

Connection is easy – thanks to the USB 2.0 port you can connect the Mobile Drive Secure to any modern computer.

The Freecom Mobile Drive Secure is pre-formatted (FAT-32), ready for use on both Windows and Mac computers. At Freecom we create storage solutions from a consumer's perspective, where convenience and quality are key factors.
